WHEN ORDERING OVERHEAD MATERIAL HANDLING EQUIPMENT,
THE FOLLOWING INFORMATION MUST ACCOMPANY YOUR ORDER:

TROLLEYS

- WHAT TYPE (SIZE) OF RAIL TROLLEYS WILL OPERATE ON

RUNWAYS

- PREP FOR EACH END (IE. SPLICE OR STOP)
- NUMBER OF SPLICES
- NUMBER OF HANGERS AND HANGING CENTERS
- NUMBER AND TYPE OF STOPS
- PAINT COLOR (YELLOW & ORANGE ARE STANDARD COLORS)
- CEILING SUPPORTED OR FREE STANDING FLOOR SUPPORTED

BRIDGE CRANES

- OVERALL LENGTH
- BRIDGE SPAN (BETWEEN RUNWAY CENTERS)
- OVERHANG (BEYOND RUNWAY CENTERS) FOR EACH END
- BRIDGE CAPACITY
- BRIDGE BEAM SIZE
- WHAT TYPE (SIZE) OF RAIL TROLLEYS WILL OPERATE ON
- WHAT TYPE OF BRIDGE END TRUCKS ARE REQUIRED
- NUMBER AND TYPE OF END STOPS
- PAINT COLOR (YELLOW & ORANGE ARE STANDARD COLORS)

AIR FESTOON OR ELECTRICAL PACKAGES

- MUST BE TOTALLY BROKEN DOWN WITH INDIVIDUAL REQUIREMENTS FOR EACH PACKAGE

ETA-4 , ETA-5 AND ETA-8 ENGINEERING DATA

FOR TOOL RAIL
AND
BRIDGE CRANE
APPLICATIONS

UNIFIED INDUSTRIES, INC. -
ETA-4, ETA-5, ETA-8 SERIES

1. All track and hangers shall be installed in accordance with the manufacturer's detailed layout drawings. Which can be supplied at an additional cost.
2. Track and bridge beam provided is Series 6000 extruded aluminum alloy track.
3. The track or bridge beam provided shall be modular design, weld free application, and self-aligning with complete bolt-together capability at all splice joints and hangers.
4. All track sections provided shall be sawcut square to required length by the manufacturer. All joints shall be subjected to tensile stress and all track joints shall be flush when complete.
5. The rated load of the runway, monorail or bridge crane shall be determined so that deflection under rated load shall not exceed 1/450 of the span. Lateral deflection will not be accepted.
6. The allowable stresses applied shall not exceed 20% of the minimum yield strength of the materials used.
7. For bridge crane or hoist application(s), the maximum overhang of the bridge girder to the center of a runway rail shall not exceed the following requirements unless approved by the owner and manufacturer:
 - a. ETA-4, ETA-5 & ETA-8 the maximum overhang shall be 12" (304.8mm) not including the end cap and end stop.
 - b. For larger overhangs, consult factory.
8. All bridge cranes, hoists, runways, monorail, and track shall be installed straight, parallel, level and at the same elevation. Installation tolerance shall not exceed the values specified below:
 - a. Longitudinal leveling, multiple runways and single rail systems .250" (6.35mm) in overall length, with a maximum rate of change of no more than .125" (3.17mm) on twenty-foot centers (6m).
 - b. Elevation runway-to-runway .250" (6.35mm) in span, maximum rate of change .125" (3.17mm) on twenty-foot centers (6m).
 - c. Centering runway-to-runway +/- .188" (4.77mm) in overall length, maximum rate of change .125" (3.17mm) on twenty-foot centers (6m).
 - d. Centering for single rail to a parallel conveyor or workstation shall be +/- .188" (4.77mm) in overall length of the system, maximum rate of change .125" (3.17mm) on twenty-foot centers (6m).
9. All sway bracing and thrust bracing required shall be provided by the contractor, all connections shall be torsional - by design. Compression-type connections will not be accepted.
10. One month after system buyoff, the enclosed track shall be thoroughly inspected and releveled by the contractor. All bolts at the splice connections' hangers and support structure shall be rechecked for proper torque. Abnormalities noted by the contractor shall be brought to the attention of the manufacturer immediately.
11. All trolley running surfaces shall be aligned flush in accordance with this specification and shall present no shock loading at a splice connection. Transverse tilt will not be accepted.

12. Joint modification or holes required in track section(s) shall be by drilling or saw cutting only. The flame cutting of holes or splice joints will not be permitted.
13. The allowable stress shall not exceed 20% of the minimum yield strength of the material provided.
14. All hangers shall be installed true and vertical. All suspension fittings shall bear the load equally.
15. All bolts, nuts, fasteners, attachments, etc., required for rail for enclosed track assembly shall be provided by the equipment manufacturer.
16. All double girder bridge cranes provided shall incorporate diagonal bracing for parallel stabilization.
17. All painted rail is for indoor use only and must be stored inside. Exposure to elements will affect the paint finish.
6. The maximum overhang of straight track to the tangent point of a horizontal turn shall not exceed 12" (305mm).
7. A minimum of one (1) hanger shall be used in the radius of each 90-degree curve, the one (1) hanger shall be in addition to one (1) hanger at each splice joint. If required, additional hangers shall be provided in accordance with the design and calculated distance based on the trolley or carrier loading.
8. Curved track section shall be installed with uniform bolt tension to insure that load trolleys do not bind at splice joint.
9. A straight section of track shall be provided between each horizontal turn.
10. All hangers provided shall be installed true to the vertical plane.

URNS

1. Enclosed track turns shall be factory formed by the manufacturer. All tension tubes shall be aligned and installed at the manufacturer's facility.
2. The radius of all enclosed track turns shall be designed to allow the carriers or trolleys to freely negotiate each horizontal turn without binding.
3. The standard radius for enclosed track turns in the ETA-4 series shall be minimum 4'0" (1219mm), unless approved by the manufacturer.
4. The standard radius for enclosed track turns in the ETA-8 series shall be minimum 6'0" (1829mm), unless approved by the manufacturer.
5. Short radius turns with a radii that is less than the standard specified above shall be pre-approved.

1. All trolleys shall be as manufactured by Unified Industries, Inc.
2. All trolleys shall consist of one (1) high-tensile aluminum-magnesium alloy.
3. All trolley wheels provided for hoists, bridge cranes, and related equipment shall conform to the manufacturer's standards for monorail hand trolleys.
4. Trolley wheels shall be hard nylon, machined symmetrically true with the axis. All trolley wheels shall be the retainer type, designed for a single row of high quality, precision-ground ball bearings. All trolley wheels shall have a stud that is press-fitted into the trolley body.
5. Trolley side guide rollers shall be hard nylon machined symmetrically true with the axis. All trolley side guide rollers shall be designed for double row, full compliment, precision-ground ball bearings.
6. All trolleys shall be equipped with safety lugs so, in the event of a wheel failure, the trolley cannot come out of the enclosed track.
7. All bearings shall be protected by grease and dust seals.
8. Load links and load straps shall be provided by the manufacturer's recommendation.
9. Under no condition shall the contractor provide light capacity trolleys for use on heavy flange track.

***All dimensions are reference only
and need to be verified with factory.**

Features

- High tensile almag alloy frame
- 1.8" (46mm) Nylon glass reinforced wheels, with permanently sealed precision ball bearings
- High-impact nylon guide rollers with smooth, quiet operation
- Operates within enclosed rail free from obstructing material
- Dielectrically insulated
- Low inertia: less than 1% of load
- Operating temperature range: +32 degrees to +212 degrees F (0 degrees to +100 degrees C)

ETA-8 RIGID END TRUCK WITH KICKUP
DUAL TROLLEY END TRUCK AT EACH
END OF CRANE GIRDER.
RATED LOAD: 2200 lbs. [1000 Kg.]
NO SAFETY CABLE INCLUDED

The Bridge Crane Assembly Consists of:

- One bridge beam (section of rail)
- Two end truck assemblies (mounted to the bridge with a trolley to roll inside of the runway, safety cables are pre-installed)
- Double end stop Assembly (U11 Standard)

Example (Bridge Rail only)

Order Number:

ETA4|BR|08

Total Bridge Length (in Feet)

Type of Bridge Rail

- Round up to the nearest foot (Cut to 8'-6" = ETA4BR09)

Unified ETA-4 single girder bridge crane consists of two end truck assemblies (either single, dual or rigid end trucks) supporting an aluminum enclosed bridge girder. See pages 23-36 for end truck specifications. Bridge girder has bolted double end stops at each end, completing assembly.

22521 SINGLE END TRUCKS

22540 DOUBLE END TRUCKS

- Standard overhang each end 12" (305mm)
- Longer overhangs consult Factory
- Paint color-specify when ordering
- Standard double end stops

22540 END TRUCKS

ETA-4 double girder bridge cranes consist of four single or dual trolley end truck assemblies supporting ETA-4 extruded aluminum bridge girders. See page 23-36 for end truck specifications. Bridge girder has bolted polyurethane end caps at each end, completing assembly.

Used for suspending hoists, nut runners, indexing fixtures, mechanical grabs, etc.

- Diagonal bracing to prohibit articulation
- 12" (305mm) standard overhang
- Air line festoon kits available. See page 48 for specifications
- Festoon trolley available, see page 18 & 19
- Paint color - specify when ordering
- Double end stops standard
- Longer overhangs consult factory

**22600 ETA-4 ARTICULATING
LOW HEADROOM END TRUCK**

**22605 ETA-4 RIGID
LOW HEADROOM END TRUCK**

Unified ETA-4 single girder low headroom bridge crane consists of two end truck assemblies supporting an aluminum enclosed bridge girder. Bridge girder and runway girder are held at the same elevation with bolted construction and a neoprene bumper at each end completing the assembly.

- Increased headroom in low areas
- Paint color - specify when ordering
- Air festooning brackets and kits are available
- Small tool, festoon trolley or tag line slider available.
- Overhangs are not available

Designed Specifically For Existing Runway Systems

- **22557** end truck assembly MBC-500-3-325 without kickup wheel for operation on 3.25 or 3.33 flat rail. Rated Load 1100 lbs. (500kg)
- **22558** end truck assembly MBC-500-3-333 without kickup wheel for operation on S6x12.5. Rated Load 1100 lbs. (500kg)
- **22559** end truck assembly MBC-500-3-4-266 without kickup wheel for operation on S4x7.7. Rated Load 1100 lbs. (500kg)
- **22574** end truck assembly MBC-500-3-325 with kickup wheel for operation on 3.25 or 3.33 flat rail. Rated Load 1100 lbs. (500kg)

Note: For Metric size beams consult factory.

- **22575** end truck assembly MBC-500-3-333 with kickup wheel for operation on S6x12.5. Rated Load 1100 lbs. (500kg)
- **22576** end truck assembly MBC-500-3-4-266 without kickup wheel for operation on S4x7.7. Rated Load 1100 lbs. (500kg)
- Self aligning end trucks
- High tensile almag alloy castings make up end truck assembly
- Counter thrust trolleys for countering extended loads are available
- Low inertia: 1-2% of load
- Paint color-specify when ordering
- Double end stops standard
- Optional rigid mount bracket
- Longer overhangs consult factory

ETA-4 JIB

A Unified ETA-4 jib crane is very desirable as a supplement to a regular traveling crane or monorail track, or for individual use in bays and along the walls or side of shops. It provides a versatile and cost-effective solution to your crane needs where adequate headroom and structural support does not exist. The jib crane rotates 220° serving the area within the radius of the beam's span.

UNIFIED AIR TRACTOR

The lube free air tractor was developed to be a compact, and reliable alternative to those large air tractors most companies are familiar with.

Features

- Lightweight and Compact
- Lube Free Air Motor
- Maintenance Friendly Design
- Quick Delivery, Excellent Pricing

Control Package Options:

- C1 = SMC Control Pack w/Fwd/Rev 2-Button Control Pendant.
 C2 = SMC Control Pack Only. (Requires main air connection + Fwd/Rev signals)
 C3 = Base Tractor Only. No Control valves.
 C4 = SMC Control Pack w/4-Button Control Pendant (Fwd/Rev + ?/?)

Part Number

- **UAT-NB-C(x)-ETA4** Air Tractor to run on ETA-4/5 rail. Specify control pack above. Weight 30 lbs (15kg)
- **25682** ETA-4/5 Tractor Tow Bar-Hitch
- **60315** Replacement Drive Wheel

Proper Tractor Operation: Tractor must come to a complete stop before it can be engaged in the opposite direction. If this process is not followed, damage to the Tractor will occur and the warranty will be void.

Designed for a working plant air pressure of: 87-102psi (600-700kPA)

***NB = No Brake**

UNIFIED AIR BALANCER

A proven ergonomic lifting and positioning device

- **Capacities** up to 485lbs. (220kg) single reeve - 1940lbs. (880kg) tandem reeved.
- **Safety** overload limit and check valve in case of loss of air supply.
- **Energy Efficient** only a fraction of a CFM per cycle required when compared to a pneumatic hoist.
- **Robust** precision mechanical design & powder coated housing ensures trouble free extended service life.
- Uses non-lubricated air, assures clean environment.
- Ideal for ergonomic handling applications and suspension of tools, weld guns & fixtures.
- All Non-Reeved balancers come equipped with a 25'-6" (9m) cable.

Control Styles

UBB = Basic Balancer with no controls

UAB = Balancer with Up/Down controls

U^ZB = Balancer with Zero G

CAUTION

This bridge crane has a safe load rating, which has been clearly marked on both sides by the manufacturer. The total weight of the suspended load should never exceed 125% of this limit. The weight of all handling devices such as buckets, magnets, grabs, balancers, hoists, weldguns, etc. must be included as a part of the suspended load. The weight of such devices should therefore be determined and clearly marked.

Consideration should be given when installing hoisting devices. Load ratings for such devices may exceed the load rating of the bridge crane.

The operator should inspect this bridge crane for loose bolts and worn, cracked or distorted parts prior to use (inspection should include all handling devices and mounting equipment). Defective parts should be replaced with manufacturer-approved parts before use of bridge crane is resumed.

This bridge crane conforms to the safety standards of the U.S. Occupational Safety and Health Administration (OSHA). Any alteration of its structure or change in its rated load capacity may render null and void any manufacturer's warranties, expressed or implied.

- **20194** 5'-0" (1524mm) Bumper trolley to operate on Unified ETA-4 and ETA-5

Features

- Aluminum trolley body
- 1.8" (46mm) High-impact nylon wheels, with permanently sealed precision ball bearings
- Operates within enclosed rail free from obstructing material
- Dielectrically insulated
- Low inertia: less than 1% of load
- Operating temperature range: +32 degrees to +212 degrees F (0 degrees to +100 degrees C)

22521 ETA-4/5 SINGLE END TRUCK

- To operate on ETA-4 and ETA-5
- Rated Load 550 lbs. (250kg)

ETA-8 RIGID END TRUCK WITH KICKUP
 DUAL TROLLEY END TRUCK AT EACH
 END OF CRANE GIRDER.
 RATED LOAD: 2200 lbs. [1000 Kg.]
 NO SAFETY CABLE INCLUDED

The Bridge Crane Assembly Consists of:

- One bridge beam (section of rail)
- Two end truck assemblies (mounted to the bridge with a trolley to roll inside of the runway, safety cables are pre-installed)
- Double end stop Assembly (Ull Standard)

Example (Bridge Rail only)

Order Number:

ETA5BR08

Total Bridge Length (in Feet)

Type of Bridge Rail

- Round up to the nearest foot (Cut to 8'-6" = ETA5BR09)

Unified ETA-5 single girder bridge crane consists of two end truck assemblies (either single dual or rigid end trucks) supporting an aluminum enclosed bridge girder. Bridge girder has bolted double end stops at each end, completing assembly.

22521 SINGLE END TRUCK

22540 DOUBLE END TRUCK

- Standard overhang each end 12" (305mm)
- Longer overhangs consult Factory
- Paint color-specify when ordering
- Standard double end stops

22540 END TRUCKS

Unified ETA-5 double girder bridge cranes are used for suspending hoists, nut runners, indexing fixtures, mechanical grabs, etc.

ETA-5 double girder bridge cranes consist of four single or dual trolley end truck assemblies supporting ETA-5 extruded aluminum bridge girders. Bridge girder has bolted polyurethane end caps at each end, completing assembly.

- Diagonal bracing to prohibit articulation
- 12" (305mm) standard overhang
- Air line festoon brackets and kits available.
- Festoon trolleys available
- Paint color - specify when ordering
- Double end stops standard
- Longer overhangs consult factory

CONVENTIONAL END TRUCK (W/O KICK-UP)
CONVENTIONAL END TRUCK (KICK-UP)

Designed Specifically For Existing Runway Systems

- **22557** end truck assembly MBC-500-3-325 without kickup wheel for operation on 3.25 or 3.33 flat rail. Rated Load 1100 lbs. (500kg)
- **22558** end truck assembly MBC-500-3-333 without kickup wheel for operation on S6x12.5. Rated Load 1100 lbs. (500kg)
- **22559** end truck assembly MBC-500-3-4-266 without kickup wheel for operation on S4x7.7. Rated Load 1100 lbs. (500kg)
- **22574** end truck assembly MBC-500-3-325 with kickup wheel for operation on 3.25 or 3.33 flat rail. Rated Load 1100 lbs. (500kg)
- **22575** end truck assembly MBC-500-3-333 with kickup wheel for operation on S6x12.5. Rated Load 1100 lbs. (500kg)
- **22576** end truck assembly MBC-500-3-4-266 without kickup wheel for operation on S4x7.7. Rated Load 1100 lbs. (500kg)
- Self aligning end trucks
- High tensile almag alloy castings make up end truck assembly
- Counter thrust trolleys for countering extended loads are available
- Low inertia: 1-2% of load
- Paint color-specify when ordering
- Double end stops standard
- Optional rigid mount bracket
- Longer overhangs consult factory

**22610 ETA-5 ARTICULATING
LOW HEADROOM END TRUCK**

**22615 ETA-5 RIGID
LOW HEADROOM END TRUCK**

Unified ETA-5 single girder low headroom bridge crane consists of two end truck assemblies supporting an aluminum enclosed bridge girder. Bridge girder and runway girder are held at the same elevation with bolted construction and a neoprene bumper at each end completing the assembly.

Unified ETA-5 single girder bridge cranes for rated loads to 1100 lbs. (500kg)

- Increased headroom in low areas
- Paint color - specify when ordering
- Air brackets and kits available
- Small tool, festoon trolley or tag line slider available.
- Overhangs are not available

ETA-5 JIB

A Unified ETA-5 jib crane is very desirable as a supplement to a regular traveling crane or monorail track, or for individual use in bays and along the walls or side of shops. It provides a versatile and cost-effective solution to your crane needs where adequate headroom and structural support does not exist. The jib crane rotates 220° serving the area within the radius of the beam's span.

UNIFIED AIR TRACTOR

The lube free air tractor was developed to be a compact, and reliable alternative to those large air tractors most companies are familiar with.

Features

- Lightweight and Compact
- Lube Free Air Motor
- Maintenance Friendly Design
- Quick Delivery, Excellent Pricing

Control Package Options:

- C1 = SMC Control Pack w/Fwd/Rev 2-Button Control Pendant.
 C2 = SMC Control Pack Only. (Requires main air connection + Fwd/Rev signals)
 C3 = Base Tractor Only. No Control valves.
 C4 = SMC Control Pack w/4-Button Control Pendant (Fwd/Rev + ?/?)

Part Number

- **UAT-NB-C(x)-ETA4** Air Tractor to run on ETA-4/5 rail. Specify control pack above. Weight 30 lbs. (15kg)
- **25682** ETA-4/5 Tractor Tow Bar-Hitch
- **60315** Replacement Drive Wheel

Proper Tractor Operation: Tractor must come to a complete stop before it can be engaged in the opposite direction. If this process is not followed, damage to the Tractor will occur and the warranty will be void.

Designed for a working plant air pressure of: 87-102psi (600-700kPA)

*NB = No Brake

UNIFIED AIR BALANCER

A proven ergonomic lifting and positioning device

- **Capacities** up to 485lbs. (220kg) single reeve - 1940lbs. (880kg) tandem reeved.
- **Safety** overload limit and check valve in case of loss of air supply.
- **Energy Efficient** only a fraction of a CFM per cycle required when compared to a pneumatic hoist.
- **Robust** precision mechanical design & powder coated housing ensures trouble free extended service life.
- Uses non-lubricated air, assures clean environment.
- Ideal for ergonomic handling applications and suspension of tools, weld guns & fixtures.
- All Non-Reeved balancers come equipped with a 25'-6" (9m) cable.

Control Styles

UBB = Basic Balancer with no controls

UAB = Balancer with Up/Down controls

U^ZB = Balancer with Zero G

CAUTION

This bridge crane has a safe load rating, which has been clearly marked on both sides by the manufacturer. The total weight of the suspended load should never exceed 125% of this limit. The weight of all handling devices such as buckets, magnets, grabs, balancers, hoists, weldguns, etc. must be included as a part of the suspended load. The weight of such devices should therefore be determined and clearly marked.

Consideration should be given when installing hoisting devices. Load ratings for such devices may exceed the load rating of the bridge crane.

The operator should inspect this bridge crane for loose bolts and worn, cracked or distorted parts prior to use (inspection should include all handling devices and mounting equipment). Defective parts should be replaced with manufacturer-approved parts before use of bridge crane is resumed.

This bridge crane conforms to the safety standards of the U.S. Occupational Safety and Health Administration (OSHA). Any alteration of its structure or change in its rated load capacity may render null and void any manufacturer's warranties, expressed or implied.

22041 SINGLE END TRUCK

22051 DUAL END TRUCK

Unified ETA-8 single girder bridge cranes consist of two end truck assemblies (either single, dual or rigid carrier trolleys) supporting an aluminum enclosed bridge girder. Bridge girder has bolted polyurethane end caps at each end, completing assembly.

Unified ETA-8 single girder bridge cranes for rated loads to 2200 lbs. (1000kg)

- Standard overhang each end 12 inches (305mm)
- Overhangs up to 48 inches (1219mm), consult factory for application review
- Counter thrust trolleys for countering extended loads are available
- Paint color - specify when ordering
- Air festooning brackets and assemblies are available
- Small tool or messenger cable trolleys available.
- Standard redundant end stops

CONVENTIONAL END TRUCK (W/O KICK-UP)
CONVENTIONAL END TRUCK (KICK-UP)

Designed Specifically For Existing Runway Systems

- **22199** end truck assembly MBC-500-3-325 without kickup wheel for operation on 3.25 patent track.
- **22200** end truck assembly MBC-500-3-333 without kickup wheel for operation on S6x12.5.
- **22201** end truck assembly MBC-500-3-4-266 without kickup wheel for operation on S4x7.7.
- **22208** end truck assembly MBC-500-3-325 with kickup wheel for operation on 3.25 patent track.
- Consult the factory for end trucks to ride on metric beams.
- **22210** end truck assembly MBC-500-3-333 with kickup wheel for operation on S6x12.5.
- **22212** end truck assembly MBC-500-3-4-266 without kickup wheel for operation on S4x7.7.
- Self aligning end trucks
- High tensile almag alloy castings make up end truck assembly
- Counter thrust trolleys for countering extended loads are available
- Low inertia: 1-2% of load
- Paint color-specify when ordering
- Double end stops standard
- End Trucks are equipped with 3.2" (82mm) steel wheels with permanently sealed precision ball bearings
- Optional Rigid Mount

- Consult factory for end trucks to ride on metric beams.
- Self aligning end trucks
- High tensile almag alloy casting make up end truck assembly
- Counter thrust trolleys for countering extended loads are available
- End truck carriers are equipped with 4.6" (117mm) steel wheels with permanently sealed precision ball bearings
- Steel side guide rollers with dual race ball bearings for smooth, quiet operation
- Low inertia: 1-2% of load
- Paint color-specify when ordering
- Standard redundant end stops
- Optional Rigid Mount

**22052 RIGID DUAL
END TRUCKS**

Unified ETA-8 double girder bridge cranes are used for suspending hoists, nut runners, indexing fixtures, mechanical grabs, etc.

ETA-8 double girder bridge cranes consist of four dual trolley end trucks supporting ETA-8 extruded aluminum bridge girders. Bridge girder has bolted polyurethane end caps at each end, completing assembly.

- Diagonal bracing to prohibit articulation
- 12" (305mm) standard overhang; specify when ordering
- Air line festoon brackets, trolleys and assemblies are available
- Paint color - specify when ordering
- Standard redundant end stops
- Longer overhangs consult factory

22051 DUAL END TRUCKS

Unified ETA-8 single girder tri-rail bridge crane equipped with three end truck assemblies **22051** dual end truck assemblies increases rated loads carrying when third rail is added. Bridge girder has bolted polyurethane end caps at each end, completing assembly. Tri-rail bridge cranes are used for hoist transfer of component parts or assemblies between stations.

- 12" (305mm) standard overhang at each end standard
- Anti-kick-up trolley available for end trucks
- Air line festooning brackets and assemblies available
- Festoon trolley or tag line slider available
- Paint color - specify when ordering
- Standard redundant end stops
- Longer overhangs consult factory

**22620 ARTICULATING LOW HEADROOM
END TRUCK SHOWN**

**22625 RIGID LOW HEADROOM
END TRUCK NOT SHOWN**

Unified ETA-8 single girder low headroom bridge crane consists of two end truck assemblies supporting an aluminum enclosed bridge girder. Bridge girder and runway girder are held at the same elevation with bolted construction and a urethane bumper at each end completing the assembly.

- Increased headroom in low areas
- Paint color - specify when ordering
- Air festooning brackets and assemblies available
- Small tool, festoon trolley or tag line slider available.
- Overhangs are not available

ETA-8 JIB

A Unified ETA-8 jib crane is very desirable as a supplement to a regular traveling crane or monorail track, or for individual use in bays and along the walls or side of shops. It provides a versatile and cost-effective solution to your crane needs where adequate headroom and structural support does not exist. The jib crane rotates 220° serving the area within the radius of the beam's span.

UNIFIED AIR TRACTOR

The lube free air tractor was developed to be a compact, and reliable alternative to those large air tractors most companies are familiar with.

Features

- Lightweight and Compact
- Lube Free Air Motor
- Maintenance Friendly Design
- Quick Delivery, Excellent Pricing

Control Package Options:

- C1 = SMC Control Pack w/Fwd/Rev 2-Button Control Pendant.
 C2 = SMC Control Pack Only. (Requires main air connection + Fwd/Rev signals)
 C3 = Base Tractor Only. No Control valves.
 C4 = SMC Control Pack w/4-Button Control Pendant (Fwd/Rev + ?/?)

Part Number

- **UAT-NB-C(x)-ETA8** Air Tractor to run on ETA-8 rail. Specify control pack above. Weight 33lbs (15kg)
- **25684** ETA-8 Tractor Tow Bar-Hitch
- **60315** Replacement Drive Wheel

Proper Tractor Operation: Tractor must come to a complete stop before it can be engaged in the opposite direction. If this process is not followed, damage to the Tractor will occur and the warranty will be void.

Designed for a working plant air pressure of: 87-102psi (600-700kPA)

***NB = No Brake**

UNIFIED AIR BALANCER

A proven ergonomic lifting and positioning device

- **Capacities** up to 485lbs. (220kg) single reeve - 1940lbs. (880kg) tandem reeved.
- **Safety** overload limit and check valve in case of loss of air supply.
- **Energy Efficient** only a fraction of a CFM per cycle required when compared to a pneumatic hoist.
- **Robust** precision mechanical design & powder coated housing ensures trouble free extended service life.
- Uses non-lubricated air, assures clean environment.
- Ideal for ergonomic handling applications and suspension of tools, weld guns & fixtures.
- All Non-Reeved balancers come equipped with a 25'-6" (9m) cable.

Control Styles

UBB = Basic Balancer with no controls

UAB = Balancer with Up/Down controls

U⁰B = Balancer with Zero G

CAUTION

This bridge crane has a safe load rating, which has been clearly marked on both sides by the manufacturer. The total weight of the suspended load should never exceed 125% of this limit. The weight of all handling devices such as buckets, magnets, grabs, balancers, hoists, weldguns, etc. must be included as a part of the suspended load. The weight of such devices should therefore be determined and clearly marked.

Consideration should be given when installing hoisting devices. Load ratings for such devices may exceed the load rating of the bridge crane.

The operator should inspect this bridge crane for loose bolts and worn, cracked or distorted parts prior to use (inspection should include all handling devices and mounting equipment). Defective parts should be replaced with manufacturer-approved parts before use of bridge crane is resumed.

This bridge crane conforms to the safety standards of the U.S. Occupational Safety and Health Administration (OSHA). Any alteration of its structure or change in its rated load capacity may render null and void any manufacturer's warranties, expressed or implied.

Application

Unified light load bridge cranes are designed for the suspension of portable spotwelding guns, power tools, balancers, hoists, fixtures etc., and other light loads not exceeding 1000 lbs. (454kg).

Specifications

Unified light load bridge cranes consist of two end truck assemblies, mounted with either MBC-500, SAC-500 or AC-500 trolleys, supporting a bridge beam. The bridge beam is a compound section with a hardened and ground flat track 3.25" in width. (See trolley section for trolley specifications).

End trucks are mounted with trolleys for operation on either flat rail or S-Beam. End stops bolted to each end of the bridge complete the assembly.

Options

- Bridge beam overhang to your specifications
- Counter thrust wheels or trolleys are available to prevent "kick-up" action when suspended load must be extended beyond bridge span
- Standard redundant end stops

NOTE:
BRIDGE CRANES ARE ALL JIGGED AND FIXTURED IN
MACHINING AND ASSEMBLY TO INSURE PROPER ALIGNMENT.

Application

Unified medium load bridge cranes are designed for the suspension of portable spot-welding guns, power tools, balancers, hoists, fixtures etc., and other medium loads not exceeding 3000 lbs. (1360kg)

Specifications

Unified medium load bridge cranes consist of two end truck assemblies, mounted with either BT-325 or MBC-1000 trolleys, supporting a bridge beam. The bridge beam is a compound section with a hardened and ground flat track 3.25" in width. (See trolley section for trolley specifications).

End trucks are mounted with trolleys for operation on either flat rail or S-Beam. End stops bolted to each end of the bridge complete the assembly.

Spans of 10 ft (3m) or more have diagonal bracing from bridge beam to end trucks.

Options

- Bridge beam overhang to your specifications
- Counter thrust wheels or trolleys are available to prevent "kick-up" action when suspended load must be extended beyond bridge span
- Bridge crane spans 10 feet (3m) to 15 feet (4.6m) will be furnished with 6" compound section bridge beam flat flange 3.25" in width
- Bridge crane spans 16 ft. (4.9m) to 20 (6m) feet will be furnished with 8" Trambeam bridge beam flat flange 3.25" in width
- Standard redundant end stops

Application

Unified overhanging bridge cranes are designed for the suspension of portable spotweld guns, power tools, balancers, hoists, fixtures etc. and other loads not exceeding recommended rated loads. See next page for rated loads of various overhangs.

Specifications

Unified overhanging bridge cranes consist of two end truck assemblies, mounted with two MBC-1000 trolleys without kickup wheels and two MBC-1000 trolleys with kickup wheels on opposite end of overhang, supporting a bridge beam. The bridge beam is a compound section with a hardened and ground flat rail 3.25" in width. See next page for various spans and rated loads.

End trucks are mounted with trolleys for operation on either flat rail or S-Beam. End stops bolted to each end of the bridge beam complete the assembly. Spans of 10 feet (3m) or more have diagonal bracing from bridge beam to end trucks.

Options

- Bridge beam overhang opposite of regular overhang to suit your requirements
- Standard redundant end stops

Application

Unified heavy load bridge cranes are designed for the suspension of balancers, hoists, fixtures, heavy portable tools etc. and other heavy loads not exceeding 8000 lbs. (3629kg)

Specifications

Unified heavy load bridge cranes consist of two end truck assemblies, mounted with BT- 325-10, supporting a bridge beam. The bridge beam is either 8" or 8 1/2" in height with a hardened and ground flat track 3.25" in width. (See trolley section for trolley specifications). End trucks are mounted with trolleys for operation on either flat rail or S-beam. Bolted end stops with neoprene bumpers complete the assembly.

Spans of 10 ft (3m) or more have diagonal bracing from bridge beam to end trucks.

Options

- Bridge beam overhang to your specifications
- Counter thrust wheels can be furnished on request when suspended load must be extended beyond bridge span
- 10" bridge beam with hardened and ground flat rail 3.25" in width
- Standard redundant end stops

Application

Unified light and medium duty telescoping units are designed for the suspension of portable spotweld guns, power tools balancers, hoists fixtures etc. and other light or medium weight loads not exceeding recommended rated loads. See next page for rated loads of various extensions.

Specifications

Unified light and medium duty telescoping units consist of one two-wheel and one three-wheel trolley or carrier head opposite of overhang, mounted to a transfer beam. The medium duty units have a compound section, with a hardened and ground flat track 3.25" in width. (See trolley section for trolley or carrier head specifications).

Transfer beam is mounted with trolleys or carrier heads for operation on either flat rail or S-Beam. End stops bolted to each end of transfer beam complete the assembly.

Options

- Transfer beam overhang opposite of extension to your specifications
- Standard redundant end stops

Application

Unified standard duty telescoping self-equalizing tandem trolley units are designed for the suspension of portable spotweld guns, power tools, balancers, hoists, fixtures, etc., and other loads not exceeding recommended rated loads. See next page for rated loads of various extensions.

Specifications

Unified standard duty telescoping units consist of two tandem trolleys welded to a transfer beam. The transfer beam is a compound section 6" in height with a hardened and ground flat rail 3.25" in width. (See trolley section for trolley specifications).

Transfer beam is mounted with tandem trolleys for operation on either flat rail or S-Beam. End stops bolted to each end of transfer beam complete the assembly.

Options

- Transfer beam overhang opposite of extension to your specifications ("C" dimension).
- Standard redundant end stops

MOTORIZED BRIDGE CRANES (AIR AND ELECTRIC)

UNIFIED MOTORIZED BRIDGE CRANE
ELECTRIC AND AIR OPERATED
(SHOWN) (NOT SHOWN)

CAUTION

This bridge crane has a safe load rating, which has been clearly marked on both sides by the manufacturer. The total weight of the suspended load should never exceed 125% of this limit. The weight of all handling devices such as buckets, magnets, grabs, balancers, hoists, weldguns, etc. must be included as a part of the suspended load. The weight of such devices should therefore be determined and clearly marked.

Consideration should be given when installing hoisting devices. Load ratings for such devices may exceed the load rating of the bridge crane.

The operator should inspect this bridge crane for loose bolts and worn, cracked or distorted parts prior to use (inspection should include all handling devices and mounting equipment). Defective parts should be replaced with manufacturer-approved parts before use of bridge crane is resumed.

This bridge crane conforms to the safety standards of the U.S. Occupational Safety and Health Administration (OSHA). Any alteration of its structure or change in its rated load capacity may render null and void any manufacturer's warranties, expressed or implied.

- **10137** FT-333-B for operation on 3.33" flange 6" S-Beam
- Consult factory for metric beams

Application

- For festooning of cable or hose along runway
- For suspension of small portable tools
- For suspension of light duty balancers

Features

- 2 inch diameter ball bearing flanged load wheels
- Flat or tapered tread for flat rail or S-Beam
- Flat ball bearing "kick-up" wheels
- Bumpers are optional
- Fits up to 7/16" max. bottom flange thickness

Options

- Can be furnished with various festooning saddles to accommodate either round or flat cables, consult factory.

- **10200** MBC-500-3-4-266 with kickup wheels for operation on 2.66" flange 4" S-Beam

Application

- Used in pairs on one or both ends of bridge crane to eliminate cantilever "kick-up" where overhang of bridge beam and load exceeds counter weight of bridge
- Use on light load telescope units for extending load beyond bridge crane span
- Can be adapted to tools and fixtures where cantilever rolling action is required. Third wheel engages underside of rail to eliminate possible drag

Features

- High tensile almag alloy frames
- Integral built in safety lugs
- Shielded side thrust roller protection
- Hardened ball bearing side thrust rollers

- **10153** MBC-1500-3-333 with kickup wheels for operation on 3.33" flange 6" S-Beam. 1500 lb. Rated Load

Application

- Used in pairs on one or both end truck assemblies of medium or standard bridge cranes with overhanging bridge beam
- Can be adapted for tools or fixtures where a "kick-up" rolling action is required

Features

- Built-in safety lugs, integral in frames
- High tensile almag alloy frames
- 4.62" diameter drop forged steel load wheels with low friction sealed bearings permanently lubricated
- Third wheel acts as a counter thrust to avoid kick-up when load is extended beyond normal bridge span. This will allow movement of bridge with suspended load
- Hardened and ground ball bearing side thrust rollers

WITH 3.33" [84.6] FLANGE WIDTH.

Part Number

- **10220** SAC-1020-325 for operation on 3.25"/3.33" flange flat rail. 1000 lb. Rated Load
- **10221** SAC-1020-333 for operation on 3.33" flange 6" S-Beam. 1000 lb. Rated Load
- **10222** SAC-1020-325D for operation on 3.25"/3.33" flange flat rail. 1500 lb. Rated Load
- **10223** SAC-1020-333D for operation on 3.33" flange 6" S-Beam. 1500 lb. Rated Load

Applications

- Used in pairs for bridge crane end truck assemblies where runway spans are not parallel

Features

- High tensile almag alloy frames
- Built-in safety lugs, integral in frames
- 4.62" diameter drop forged steel load wheels with low friction sealed bearings permanently lubricated
- Hardened and ground ball bearing side thrust rollers
- Steel self-aligning pin
- Brass wear plate

Options

- Dual bearing for greater rated loads up to 1500 lbs. (680kg) designated by the D at the end of the description

Application

- For suspension of portable tools, welding guns, balancers, hoists, fixtures etc.
- Used in pairs for bridge crane end truck assemblies and load bars

Features

- Patented dual safety clevis
- 3.25" diameter load wheels
- High tensile almag alloy frames
- Hardened and ground ball bearing side thrust rollers
- Minimum track radius is 60" (1524mm)

Options

- Available with or without forged eye bolt
- Available with or without dual hanging strap
- Flat or contoured "Conveyor" steel load wheels

CAUTION

This bridge crane has a safe load rating, which has been clearly marked on both sides by the manufacturer. The total weight of the suspended load should never exceed 125% of this limit. The weight of all handling devices such as buckets, magnets, grabs, balancers, hoists, weldguns, etc. must be included as a part of the suspended load. The weight of such devices should therefore be determined and clearly marked.

Consideration should be given when installing hoisting devices. Load ratings for such devices may exceed the load rating of the bridge crane.

The operator should inspect this bridge crane for loose bolts and worn, cracked or distorted parts prior to use (inspection should include all handling devices and mounting equipment). Defective parts should be replaced with manufacturer-approved parts before use of bridge crane is resumed.

This bridge crane conforms to the safety standards of the U.S. Occupational Safety and Health Administration (OSHA). Any alteration of its structure or change in its rated load capacity may render null and void any manufacturer's warranties, expressed or implied.

Application

- **Unified** low headroom end trucks are designed for use on bridge cranes that operate in an area of low headroom conditions.
- Or used as individual load bars to your specifications

Features

Unified low headroom end trucks are available with three trolley or carrier head adaptions.

- Series BT for bridge cranes with no overhang
- Series MBC-1000 with no kickup wheel for bridge cranes with no overhang or used in conjunction with MBC-1000 with kickup wheel end truck
- Series MBC-1000 for bridge cranes with overhang that requires an end truck with kickup wheels

- AC-500-2-4 for operation on 2.66 flange 4" S-Beam (7.7 lb.)

Application

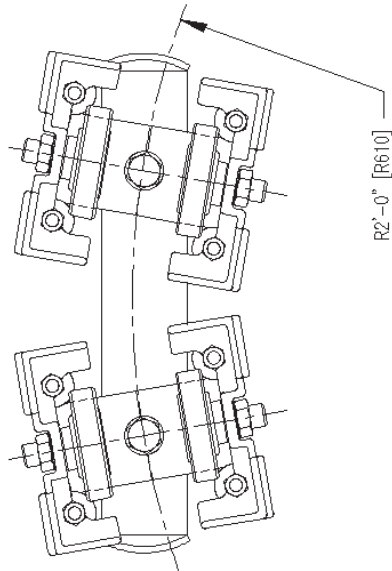

- Used in tandem as articulating load bars on horizontal curved monorail systems

Features

- High tensile almag alloy frames
- Integral built-in safety lugs
- Shielded side thrust roller protection
- Hardened ball bearing side thrust rollers
- Forged wheels 3.2" diameter flat or contoured induction hardened with permanently sealed precision ball bearings
- Load bearing brass wear plate
- Heat-treated steel pivot bolt

Options

- Standard conveyor wheels 3.2" diameter flat or contoured with lubricated ball bearings
- Can be furnished as an assembled end truck or load bar

Counter Thrust Roller Assembly

Model Number

- CTR-5014-1 (15090)

Application

- Used singly or in pairs on bridge crane end trucks where wheel engages bottom surface of runway rail to absorb "kick-up" action when load is moved to extreme end of an overhang bridge beam

Features

- Large 3 1/8" dia. wheel
- Adjustable height for runway rail clearance
- 1,500 lb. (680kg) Rated Load per CTR

COUNTER THRUST ROLLER ASSEMBLY #CTR-5014-1
LARGE 3 1/8" DIA. WHEEL

Universal Swivel Assemblies

Model Number

- S-300-1 For use on **Unified** trolley BT-325-10 and BT-333-10

Application

- **Unified** universal swivel assemblies are designed for the suspension of transformer stations not exceeding 2000 lbs. (907kg)
- Also used for the suspension of portable tools, hoists and fixtures

Features

- Rotating shaft on universal swivel designed to fit standard transformer clevis
- Universal swivel permits suspended load to move in all three planes

DHS-5011-1 (15100)

DHS-5012-1 (15110)

Model Number

- DHS-5011-1 for use with **Unified** trolleys BT-325, BT-266 and BT-333
- DHS-5012-1 for use with **Unified** trolleys BT-325-10, BT-333-10

Application

- For suspension of balancers, hoists, portable tools, power tools, fixtures etc.

Features

- Forged steel eyebolt or eyebolt and eyenut

Options

- Available with or without forged eyebolt and eyenut or with standard hex head bolt

End Stops

Load Link

Model Number

Unified standard redundant end stop

- **15161** ES-5024-1
- Furnished as standard equipment on all **Unified** bridge cranes except heavy load bridge crane

Unified standard redundant end stop

- **15171** ES-5025-1
- Attached with two 1/2" steel bolts
- Will take the impact of the carrier on the end truck or load bar rather than on the load wheel

Unified standard redundant end stop

- **15181** ES-5026-1
- Furnished as standard equipment on all **Unified** heavy load bridge cranes
- Optional on other bridge cranes
- **15196** Double Webb End Stop
- Optional on heavy load bridge cranes and runways

Model Number

- **LL-5022-1** for use on **Unified** trolleys **BT-325-10** & **BT-333-10**

Application

Used to suspend a variety of loads such as balancers, hoists, hooks, fixtures etc.

UNIFIED AIR TRACTOR

The lube free air tractor was developed to be a compact, and reliable alternative to those large air tractors most companies are familiar with.

Features

- Lightweight and Compact
- Lube Free Air Motor
- Maintenance Friendly Design
- Quick Delivery, Excellent Pricing

Control Package Options:

- C1 = SMC Control Pack w/Fwd/Rev 2-Button Control Pendant.
 C2 = SMC Control Pack Only. (Requires main air connection + Fwd/Rev signals)
 C3 = Base Tractor Only. No Control valves.
 C4 = SMC Control Pack w/4-Button Control Pendant (Fwd/Rev + ?/?)

Part Number

- **UAT-NB-C(x)-PAT** to run on Patent Track rail. Specify control pack above. Weight 75 lbs (34kg)
- **UAT-NB-C(x)-S4** to run on S4x7.7 rail. Specify control pack above. Weight 75 lbs (34kg)
- **UAT-NB-C(x)-S6** to run on S6x12.5 rail. Specify control pack above. Weight 75 lbs (34kg)
- **UAT-NB-C(x)-S8** to run on S8x18.4 rail. Specify control pack above. Weight 75 lbs (34kg)
- **60316** Replacement Drive Wheel

Proper Tractor Operation: Tractor must come to a complete stop before it can be engaged in the opposite direction. If this process is not followed, damage to the Tractor will occur and the warranty will be void.

Unified Universal Insulated Trolley Assembly (Series UT-1000)

UNIFIED INDUSTRIES IS PROUD TO PROVIDE OUR UNIFIED CUSTOM PATENT RAIL SECTIONS

Unified Custom Patent Rail Sections are available up to 20'-0" (6m) in length and three (3) different sizes: 4", 5" & 6" (see page 16 for cross-section).

Unified Custom Patent Rails are compatible with our Unified Patent Rail Trolleys as shown in the "Standard Shapes Trolleys" Section of this catalog.

Unified Custom Patent Rails can be utilized in special circumstances such as: custom-built bridges and runways as illustrated in the "Manual Bridge Cranes" Section of this catalog.

Should you require further information concerning the "Unified Custom Patent Rail" Section or any other Unified Product, please consult the factory.

Unified Industries is also pleased to provide "Trambeam" patented rail sections in both light and heavy rail.

Note: Unified stocks all light rail sections and has to order all Heavy rail sections.

CAUTION

This bridge crane has a safe load rating, which has been clearly marked on both sides by the manufacturer. The total weight of the suspended load should never exceed 125% of this limit. The weight of all handling devices such as buckets, magnets, grabs, balancers, hoists, weldguns, etc. must be included as a part of the suspended load. The weight of such devices should therefore be determined and clearly marked.

Consideration should be given when installing hoisting devices. Load ratings for such devices may exceed the load rating of the bridge crane.

The operator should inspect this bridge crane for loose bolts and worn, cracked or distorted parts prior to use (inspection should include all handling devices and mounting equipment). Defective parts should be replaced with manufacturer-approved parts before use of bridge crane is resumed.

This bridge crane conforms to the safety standards of the U.S. Occupational Safety and Health Administration (OSHA). Any alteration of its structure or change in its rated load capacity may render null and void any manufacturer's warranties, expressed or implied.

STANDARD SHAPES TROLLEY PARTS MANUAL

PARTS AND REPAIR MANUAL

This manual has been compiled to expedite the ordering of repair parts for Unified Industries' products, as well as to present to maintenance personnel the correct method of servicing the product.

In order to show all component details of Unified Industries' products, an exploded view has been shown for each model. Further technical information is available in our current full line product catalog.

INSTRUCTIONS FOR ORDERING

Locate the model required in the index and turn to the page number indicated for the exploded view.

Each serviceable part or sub-assembly in the exploded view is identified by a reference number. Use the reference number to locate the necessary part information in the parts list on the opposite page.

Any parts listed without a reference number in the parts list are not sold separately, but are included in the sub-assembly above it as shown in the exploded view. Each item listed as a sub-assembly will be sold complete including all of its component parts listed directly below it.

The parts list quantity column gives the required amount of each component part for each complete assembly.

Specify which model each part is being ordered for to ensure that the correct part is shipped.

Always use the complete stock code number and part description for each part being ordered.

Specify the quantity needed for each part being ordered.

Email your order to: sales@unified-ind.com

or call Project / Distributor Sales at: (517) 546-3220

GENERAL OPERATION AND MAINTENANCE INSTRUCTIONS

A physical inspection of all Unified Industries' products is required at least every six months. Visually inspect all parts, moving as well as non-moving, for cracks, excessive wear, or other damage. Particular attention should be given to the following parts: load wheels (outer surface and bearings), side guide rollers, kick-up wheels, safety straps, attachment mechanisms or bolts, and all contact surfaces. Should cracks, excessive wear, or other damage be present, replace the part.

All trollies must move freely without restriction during operation. Should any restriction be present, an inspection and correction of the problem should be made.

Rail and bridge girder running surfaces must be clean and in good condition to allow the trollies to move freely.

Runway surfaces must be parallel and level to provide proper alignment for the bridge crane end trucks.

End stops on all bridge cranes, telescoping beams, or rails must be securely fastened with Grade 5 bolts, slotted nuts, and cotter pins. End stop bolts must be mounted with bolt head on rail surface, threads down, through the rail and end stop, as shown in exploded views of bridge cranes and telescopes.

Never operate bridge cranes without end truck trollies properly and securely fastened.

Do not load any bridge crane and/or trolley beyond its rated capacity as so labeled.

Safety straps are provided on trollies without built-in safety lugs in the casting. Any safety items such as safety straps, chains, etc. - provided with Unified Industries' trollies - must remain in place to provide added safety protection for the operator.

Any trolley model designed with special sliding or articulating action must be correctly mounted to allow the movement required.

Any conveyor type load wheels with grease fittings on the axle should be inspected and properly greased, using a silicone free molysulfide grease, approximately every six months depending on work load and use.

ETA SYSTEM PARTS MANUAL

ETA-4, ETA-5 & ETA-8

PARTS AND REPAIR MANUAL

This manual has been compiled to expedite the ordering of repair parts for Unified Industries' products, as well as to present to maintenance personnel the correct method of servicing the product.

In order to show all component details of Unified Industries' products, an exploded view has been shown for each model. Further technical information is available in our current full line product catalog.

INSTRUCTIONS FOR ORDERING

Locate the model required in the index and turn to the page number indicated for the exploded view.

Each serviceable part or sub-assembly in the exploded view is identified by a reference number. Use the reference number to locate the necessary part information in the parts list on the opposite page.

Any parts listed without a reference number in the parts list are not sold separately, but are included in the sub-assembly above it as shown in the exploded view. Each item listed as a sub-assembly will be sold complete including all of its component parts listed directly below it.

The parts list quantity column gives the required amount of each component part for each complete assembly.

Specify which model each part is being ordered for to ensure that the correct part is shipped.

Always use the complete stock code number and part description for each part being ordered.

Specify the quantity needed for each part being ordered.

Email your order to: sales@unified-ind.com

Fax your order to: (517) 546-1273

or call Sales at: (517) 546-3220

GENERAL OPERATION AND MAINTENANCE INSTRUCTIONS

A physical inspection of all Unified Industries' products is required per OSHA standards. Visually inspect all parts, moving as well as non-moving, for cracks, excessive wear, or other damage. Particular attention should be given to the following parts: load wheels (outer surface and bearings), side guide rollers, kick-up wheels, safety straps, attachment mechanisms or bolts, and all contact surfaces. Should cracks, excessive wear, or other damage be present, replace the part.

All trolleys must move freely without restriction during operation. Should any restriction be present, an inspection and correction of the problem should be made.

Rail and bridge girder running surfaces must be clean and in good condition to allow the trolleys to move freely.

Runway surfaces must be parallel and level to provide proper alignment for the bridge crane end trucks.

End stops on all bridge cranes, telescoping beams, or rails must be securely fastened with Grade 5 bolts, slotted nuts, and cotter pins. End stop bolts must be mounted with bolt head on rail surface, threads down, through the rail and end stop, as shown in exploded views of bridge cranes and telescopes.

Never operate bridge cranes without end truck trolleys properly and securely fastened.

Do not load any bridge crane and/or trolley beyond its rated capacity as so labeled.

Safety straps are provided on trollies without built-in safety lugs in the casting. Any safety items such as safety straps, chains, etc. - provided with Unified Industries' trolleys - must remain in place to provide added safety protection for the operator.

Any trolley model designed with special sliding or articulating action must be correctly mounted to allow the movement required.

Any conveyor type load wheels with grease fittings on the axle should be inspected and properly greased, using a silicone free molysulfide grease, approximately every six months depending on work load and use.

INSTALLATION OF THE 27070 HANGER ASSEMBLY

- Shown as an exploded assembly, the 27070 Hanger Assembly is shipped completely assembled.
- The 27070 Hanger Assembly can be used on ETA-4/5 & 8 rail series. **NOTE: For use on W-Beams Only.**

INSTALLATION PROCEDURE

1. Loosen nuts, washers (Items 2, 3) on 27070 Hanger Assembly (Item 6).
2. Slide rigid hanger block (Item 5) into top channel of ETA rail.
3. Slide Hanger assemblies (Item 6) onto header steel and push into place on beam, snug* tighten nuts. (Item 2)
- This procedure requires the installer to lift entire rail and hangers to the header steel.
4. Drill (1) hole thru in the center of where the header steel will be directly above ETA Runway. (See Drilling guide below)
5. Fasten Safety cable (Item 1) through drilled holes and around header steel. Refer to Safety cable installation instructions.
6. Continue until all required hangers are placed onto header steel.

*Snug tight is the condition that exists when all of the plies in a connection have been pulled into firm contact by the bolts in the joint and all of the bolts in the joint have been tightened sufficiently to prevent the removal of the nuts without the use of a wrench. (RCSC – Specifications for Structural Joints Using High-Strength Bolts Sec. 8.1)

INSTALLATION OF THE ETA-4/5 27071/27073 PARALLEL RIGID HANGER ASSEMBLY

- The ETA-4/5 27073 Hanger Assembly can be used for beams 2.33" to 3.33". Assembly can be mounted to header steel that is parallel to the runway.
- The ETA-4/5 27071 Hanger Assembly can be used for beams 4" to 8". Assembly can be mounted to header steel that is parallel to the runway.

INSTALLATION PROCEDURE

1. Drill (2) holes in the location where the center of the hanger weldment will need to clamp to the header steel above. (See Drilling guide below)
2. Remove the (2) rod ends & (2) nuts (Items 3,4) on beam clamp weldment (Item 2).
3. Slide beam clamp weldment (Item 2) into top channel of ETA rail. Place rod ends (Item 3) through runway rail & beam clamp weldment and secure with nuts (Item 4) until snug* against rail.
- This procedure requires the installer to lift entire rail and hangers to the header steel.
4. Remove hardware (Items 5,6,7,8) from beam clamp weldment (item 2). Center hanger clip below header steel. Bolt on rollover clips (item 5) into the closest holes to the center of header beam using washers (item 7) and nuts (item 8) until snug* tight.
5. Fasten Safety cable (Item 1) through rod end holes and around header steel. Refer to Safety cable installation instructions.
6. Continue until all required hangers are placed onto header steel.

INSTALLATION OF THE ETA-8 27072/27074 PARALLEL RIGID HANGER ASSEMBLY

- The ETA-8 27074 Hanger Assembly can be used for beams 2.33" to 3.33". Assembly can be mounted to header steel that is parallel to the runway.
- The ETA-8 27072 Hanger Assembly can be used for beams 4" to 8". Assembly can be mounted to header steel that is parallel to the runway.

INSTALLATION PROCEDURE

1. Drill (2) holes in the location where the center of the hanger weldment will need to clamp to the header steel above. (See Drilling guide below)
2. Remove the (2) rod ends & (2) nuts (Items 3,4) on beam clamp weldment (Item 2).
3. Slide beam clamp weldment (Item 2) into top channel of ETA rail. Place rod ends (Item 3) through runway rail & beam clamp weldment and secure with nuts (Item 4) until snug* against rail.

INSTALLATION OF THE ETA-4/5 27055/27057 BEAM & 25286 BLOCK HANGER ASSEMBLY

- Shown as an exploded assembly, the ETA-4/5 25286 Hanger Assembly is shipped completely assembled.
- The ETA-4/5 27055 Hanger Assembly can be used for beams 2.33" to 3.33". Assembly can be mounted to header steel that is either parallel or perpendicular to runway.
- The ETA-4/5 27057 Hanger Assembly can be used for beams 4" to 8". Assembly can be mounted to header steel that is either parallel or perpendicular to runway.

INSTALLATION PROCEDURE

1. Drill (2) holes in the center of where the header steel will be directly above ETA Runway into top channel of rail. (See Drilling guide below)
2. Remove the (2) rod ends & (2) nuts (Items 3,4) on Hanger Block (Item 2).
3. Slide hanger block (Item 2) into top channel of ETA rail. Place rod ends (Item 3) through runway rail & hanger block and secure with nuts (Item 4) until snug* against rail.

Below steps are for 27055/27057 Beam Hangers only; for 25286 block hanger skip to steps (6 & 7)

4. Remove hardware (Items 9,10,11,12) from hanger clip (item 5). Center hanger clip below header steel and position so runway rail will be under Beam hanger (item 5). Bolt on rollover clips (item 9) into the closest holes to the center of header beam using washers (item 11) and nuts (item 12) until snug* tight.
- This procedure requires the installer to lift entire rail and hangers to the header steel.
5. Remove items (6,7,8) from Hanger Clip (item 5) and bolt hanger block (item 2) to Hanger Clip until snug* tight.
6. Fasten Safety cable (Item 1) through rod end holes and around header steel. Refer to Safety cable installation instructions.
7. Continue until all required hangers are placed onto header steel.

INSTALLATION OF THE ETA-4/5 25473/25474/25467 ADJUSTABLE BLOCK HANGER ASSEMBLY

- Shown as an exploded assembly, the ETA-4/5 25467 Hanger Assembly is shipped completely assembled.
- The ETA-4/5 25473 Hanger Assembly can be used for beams 2.33" to 3.33". The ETA-4/5 25474 Hanger Assembly can be used for beams 4" to 8". The assembly can be mounted to header steel that is either parallel or perpendicular to runway.

INSTALLATION PROCEDURE

1. Drill (2) holes in the center of where the header steel will be directly above ETA Runway into top channel of rail. (See Drilling guide below)
2. Remove the (2) rod ends & (2) nuts (Items 3,4) on Hanger Block (Item 2).
3. Slide hanger block (Item 2) into top channel of ETA rail. Place rod ends (Item 3) through runway rail & hanger block and secure with nuts (Item 4) until snug* against rail.

Below steps are for 25473/25474 Hangers only; for 25467 Hanger skip to steps (6 & 7)

4. Remove hardware (Items 9,10,11,12) from hanger clip (item 5). Center hanger clip below header steel and position so runway rail will be under Beam hanger (item 5). Bolt on rollover clips (item 9) into the closest holes to the center of header beam using washers (item 11) and nuts (item 12) until snug* tight.
- This procedure requires the installer to lift entire rail and hangers to the header steel.
5. Remove items (6,7,8) from Hanger Block (item 2) and bolt hanger block (item 2) to Hanger Clip until snug* tight.
6. Fasten Safety cable (Item 1) through rod end holes and around header steel. Refer to Safety cable installation instructions.
7. Continue until all required hangers are placed onto header steel.

RAIL LEVELING PROCEDURE

1. Loosen jam nut (See Below)
2. Adjust height by turning welded nut (see below)
3. When proper adjustment is obtained, run jam nut against top bracket and torque to (85 ft. lbs).
4. Verify that ALL Hanger Assemblies are positioned, attached, & torqued to the proper specification.
5. **It is vital that all hardware is properly secured before any load is carried on the rail.**

INSTALLATION OF THE ETA-8 27059/27061 BEAM & 25170 BLOCK HANGER ASSEMBLY

- Shown as an exploded assembly, the ETA-8 25170 Hanger Assembly is shipped completely assembled.
- The ETA-8 27059 Hanger Assembly can be used for beams 2.33" to 3.33". Assembly can be mounted to header steel that is either parallel or perpendicular to runway.
- The ETA-8 27061 Hanger Assembly can be used for beams 4" to 8". Assembly can be mounted to header steel that is either parallel or perpendicular to runway.

INSTALLATION PROCEDURE

- Drill (2) holes in the center of where the header steel will be directly above ETA Runway into top channel of rail. (See Drilling guide below)
- Remove the (2) rod ends & (2) nuts (Items 3,4) on Block Hanger (Item 2).
- Slide Block Hanger (Item 2) into top channel of ETA rail. Place rod ends (Item 3) through runway rail & block hanger and secure with nuts (Item 4) until snug* against rail.

Below steps are for 27059/27061 Beam Hangers only; for 25170 block hanger skip to steps (6 & 7)

- Remove hardware (Items 9,10,11,12) from hanger clip (item 5). Center hanger clip below header steel and position so runway rail will be under Beam hanger (item 5). Bolt on rollover clips (item 9) into the closest holes to the center of header beam using washers (item 11) and nuts (item 12) until snug* tight.

INSTALLATION OF THE ETA-8 25471/25472/25465 ADJUSTABLE BLOCK HANGER ASSEMBLY

- Shown as an exploded assembly, the ETA-8 25465 Hanger Assembly is shipped completely assembled.
- The ETA-8 25471 Hanger Assembly can be used for beams 2.33" to 3.33". The ETA-8 25472 Hanger Assembly can be used for beams 4" to 8". The assembly can be mounted to header steel that is either parallel or perpendicular to runway.

INSTALLATION PROCEDURE

1. Drill (2) holes in the center of where the header steel will be directly above ETA Runway into top channel of rail. (See Drilling guide below)
2. Remove the (2) rod ends & (2) nuts (Items 3,4) on Hanger Block (Item 2).
3. Slide hanger block (Item 2) into top channel of ETA rail. Place rod ends (Item 3) through runway rail & hanger block and secure with nuts (Item 4) until snug* against rail.

Below steps are for 25471/25472 Hangers only; for 25465 Hanger skip to steps (6 & 7)

4. Remove hardware (Items 9,10,11,12) from hanger clip (item 5). Center hanger clip below header steel and position so runway rail will be under Beam hanger (item 5). Bolt on rollover clips (item 9) into the closest holes to the center of header beam using washers (item 11) and nuts (item 12) until snug* tight.
- This procedure requires the installer to lift entire rail and hangers to the header steel.
5. Remove items (6,7,8) from Hanger Block (item 2) and bolt hanger block (item 2) to Hanger Clip until snug* tight.
6. Fasten Safety cable (Item 1) through rod end holes and around header steel. Refer to Safety cable installation instructions.
7. Continue until all required hangers are placed onto header steel.

INSTALLATION OF THE 24900/25194/24950 CAP ASSEMBLIES

- Shown as an exploded assemblies, the Double End Cap Assembly is shipped separately with nuts and bolts attached.
- The 1/8" safety cable and crimped sleeves are not intended to be removed and will **VOID** the warranty.
- Rail comes pre-drilled from the factory. Drilling Guide is available on next page (Figure 1.)

INSTALLATION PROCEDURE

1. Remove (Items 1 & 2) from End Cap Assembly (Items 3 & 4).
2. Slide inner stop (Item 3) Assy. into runway until bolt holes line up.
3. Insert bolts and attach locknuts, (Items 1&2), tighten until nut is snug, do not over-tighten and collapse rail.
4. Slide End Cap over end of Rail until bolt holes line up.
5. Insert bolts and attach locknuts (Items 1 & 2), tighten until nut is snug, do not over-tighten and collapse rail.

INSTALLATION OF THE 25133/25134/25135 STOP SHOCK ABSORBER ASSEMBLIES

- Shown as an exploded assemblies, the End Cap Shock Absorber Assembly is shipped separately with nuts and bolts attached.
- The 1/8" safety cable and crimped sleeves are not intended to be removed and will **VOID** the warranty.

INSTALLATION PROCEDURE

1. Remove (Items 1 & 2) from End Cap Assembly (Items 3 & 4).
2. Loosen the (2) bolts (item 5) in bottom of (item 3) and slide into channel of rail followed by End Cap (item 4) into rail until bolt holes line up.
3. Torque bolts (items 5)
4. Insert bolts and attach locknuts, (Items 1 & 2), tighten until nut is snug, do not over-tighten and collapse rail.

INSTALLATION OF THE 25570/25580 MID RAIL STOP ASSEMBLY

INSTALLATION PROCEDURE

1. Loosen bolts on Mid Rail Stop assembly. (Item 1)
 2. Slide Mid Rail Stop assembly into ETA rail with (Detail a) portion of assembly below rail.
 3. After Mid Rail Stop assembly is positioned torque bolts to (see below)
-

25580 (ETA-4/5 Rail)

Torque bolts to: 26 ft. lbs.[35Nm]

25570 (ETA-8 Rail)

Torque bolts to: 64 ft. lbs.[87Nm]

INSTALLATION OF THE 25575/25576 INSERTABLE MID RAIL STOP ASSEMBLY

INSTALLATION PROCEDURE

1. Drill Top and bottom holes in upper and lower channel at desired location (see fig 2. on next page) for specific rail type hole location and hole size)
2. Loosen/remove washers nuts and bolts and plate on Mid Rail Stop (item 8) assembly. (Items 1,2,4,5 & 6)
3. Place plate (item 5) into lower channel of rail. With a flat head screw driver place upright with holes facing out. Insert Mid Stop assembly (item 8) into rail and line up with plate. Screw bolts and lock washers (items 4 & 6) into Mid Stop assembly, leave loose.
4. Slide Mid Stop assembly (item 8) into place over the lower drilled hole. Place lower bolt (item 1) through Mid Stop assembly and out the other side of rail. Secure with washer (item 3) and nut (item 2). Tighten until nut seats against washer.
5. Insert bolt (item 7) into upper hole of rail and place through safety wire loop (item a) and then through the next hole in rail and secure with nut (item 2). NOTE: Please make sure wire loop is inside the upper channel of rail.
6. After Mid Rail Stop assembly is positioned torque bolts (item 4) to (see below)

INSTALLATION OF THE 25185/25179 POSITION STOP SHOCK ASSEMBLY

INSTALLATION PROCEDURE

1. Loosen bolts on Position Stop Shock Absorber Assembly. (Item 1)
 2. Slide Stop Shock Absorber Assembly into ETA rail with (Detail a) portion of assembly below rail.
 3. After Stop Shock Absorber Assembly is positioned torque bolts to (see below)
-

Part # 25185 (ETA-4/5 Rail)

Torque bolts to: 25 ft. lbs. [34Nm]

Part # 25179 (ETA-8 Rail)

Torque bolts to: 45 ft. lbs. [61Nm]

INSTALLATION OF THE 78287 SAFETY CABLE ASSEMBLY

INSTALLING SAFETY CABLE:

1. ROUTE THE WIRE ROPE THROUGH ONE ROD END, OVER RUNWAY AND THROUGH THE SECOND ROD END AND LAST OVER HEADER. (ROD END NOT REQUIRED FOR ETA RIGID MOUNT HANGER ASSEMBLY - PART NO. 27070. WIRE TO BE ROUTED THROUGH FIELD DRILLED HOLE AND OVER HEADER FOR PART NO. 27070 ONLY.)
2. USE THE TWO THIMBLES TO MAKE AN INTERLOCKING CONNECTION AND ROUTE THE WIRE ROPE AROUND THE THIMBLES.
3. APPLY THE FIRST CLAMP ONE BASE WIDTH FROM DEAD END OF THE WIRE ROPE, SNUG NUTS.
4. APPLY SECOND CLAMP AS CLOSE TO THIMBLE AS POSSIBLE, SNUG NUTS.
5. MAXIMUM HOLDING POWER IS ACHIEVED WHEN THE DISTANCE BETWEEN THE CLAMP AT ONE END IS 6-7 TIMES THE DIAMETER OF THE WIRE ROPE APART FROM THE OTHER CLAMP.
6. TAKE UP SLACK BY APPLYING TENSION TO THE THIMBLE AND CABLE; TIGHTEN NUTS EVENLY, ALTERNATING FROM ONE NUT TO THE OTHER UNTIL REACHING 15 FT. LBS. OF TORQUE.
7. ALL REDUNDANT SUPPORT SYSTEMS SHALL BE INSTALLED TO MINIMIZE LOAD DROP TO 1" OR LESS IN THE EVENT OF FAILURE AT THE PRIMARY CONNECTION.

CAUTION

WHEN ASSEMBLING WIRE ROPE CLAMPS TO WIRE ROPE BE SURE THE SADDLE PART OF THE CLAMP IS ON THE LIVE END OF THE ROPE. THE U-BOLT PART OF THE CLAMP SHOULD BE ON THE DEAD OR SHORT END OF THE ROPE.

INSTALLATION OF AN ETA INSPECTION GATE (CURRENT VERSION)

NOTE

Use this process to re-secure an inspection gate after use.

1. DETERMINE GATE LOCATION. GATE SHOULD BE LOCATED NO MORE THAN 12" FROM A HANGER.
2. CLOSE GATE AND SECURE WITH GATE SPLICES. TORQUE SPLICE BAR BOLTS PER TABLE 1.
3. WHEN INSTALLING NEAR A SPLICE, GATE MUST BE LOCATED A MINIMUM OF 12".

TABLE 1.

Splice bar assembly torque requirement:

ETA-4 17 ft.lbs

ETA-5 17 ft.lbs

ETA-8 70 ft.lbs

INSTALLATION OF AN ETA INSPECTION GATE (OLD VERSION)

NOTE

Use this process to re-secure an inspection gate after use.

1. Place (2) C-clamps on each seam of the inspection gate and rail. Snug tight.
2. Insert splice bar assemblies into each end of the inspection gate (as shown in Fig. 1)
Tighten bolts to recommended torque. This will insure that the running surface and guide roller surface remain flush to each other.

Splice bar assembly torque requirement:

ETA-4 - 19 ft. lbs [26Nm]

ETA-5 - 19 ft. lbs [26Nm]

ETA-8 - 65 ft. lbs [88Nm]

3. Remove C-Clamps.

FIG. 1

STEP 1: Insure that your overhead steel will comply with your system to be installed (ie):

1. Weight.
2. Hang points.

SAFETY NOTE

NOTE

When splicing two rails together:

1. Slide lower portion of hanger or splice block (Item 1) into top channel of one rail, insert rod end or top splice bolt, (item 4) into place. Insert ETA splice bar assemblies into both side channels of one rail. (Item 5)
Slide second rail onto hanger or splice block and ETA splice bar assemblies from the other side, insert rod end or second top splice bolt into place.
2. Now that the two rails are butted up to each other, center ETA splice bar assemblies, (Item 5) across both rails and tighten to recommended torque. This will insure that the running surface and guide roller surface remain flush to each other.
3. Now tighten upper rod ends or upper splice bolts, (Item 4) until snug against rail.

STEP 3: Lift and roll end trucks into runways. Position bridge a safe distance from ends of runways and install end caps. (Item 2) per instructions.

STEP 4: SYSTEM CHECK

1. Check all bolted connections to insure they are all secure.
2. Check that runways are level (only adjustable hangers)
3. Check all splice connections to insure all running surfaces and guide roller surfaces are flush.

Note: Hanger must be within 1' [305mm] of splice.

Splice bar assembly torque requirement:

25514 ETA-4/5 - 19 ft. lbs [26Nm]
25552 ETA-8 - 65 ft. lbs. [88Nm]

INSTALLATION OF A STEEL BRIDGE SYSTEM

STEP 1: Insure that your overhead steel will comply with your system to be installed (ie):

1. Weight.
2. Hang points.

STEP 2: Attach beam clips, (Item 1), to overhead steel and slide into approximate position

NOTE

When splicing two rails together:

1. Slide top flange of one runway rail into beam clips (Item 1). Slide next rail into beam clips and push both rails together.
2. Now that the two rails are butted up to each other, center a beam clip, (Item 1), over the location where the beams meet and tighten.
3. Place splice plates on both sides of web where rails butt together insert splice bolts and tighten.

STEP 3: Lift and roll end trucks into runways. Position bridge a safe distance from ends of runways and install end caps, (Item 2) per instructions.

STEP 4: SYSTEM CHECK

1. Check all bolted connections to insure they are all secure.
2. Check that runways are level.
3. Check all splice connections to insure all running surfaces and guide roller surfaces are flush.

INSTALLATION OF THE ETA COILED HOSE RUNWAY & BRIDGE FESTOON PACKAGE

■ Note: ETA runways should be installed level and secured, per instructions prior to festoon installation.

INSTALLATION PROCEDURE

- 1. Each festoon package (Runway or Bridge) comes with (2) festoon brackets (Item 4). Slide the one with elbows and coated cable ass'y attached (item 4a) into top channel of one ETA runway or bridge. Locate on end of rail closest to plant air supply. Place the other bracket (Item 4b), on other end of the same runway rail.
- 2. Run coated cable end with rod end through coiled hose assembly (Item 5).
- 3. Remove one of the two jam nuts on rod end and attach it to the other festoon bracket, (Item 4b), at other end of runway, (cable comes cut and assembled to length).
- 4. After the rod end has been inserted into festoon bracket put second jam nut on rod end on opposite side of bracket. Adjust jam nuts until proper cable tension is achieved and tighten jam nuts against bracket.
- 5. Attach plant air supply to whip hose (Item 8a) on festoon bracket (runway festoon kit only).
- 6. Install coiled hose to bottom elbow on festoon bracket (Item 4a).
- 7. Use coupling and attach whip hose (Item 8b) to other end of coiled hose.
- 8. Install bridge per instructions (Item 3).
- 9. Attach ETA Double End caps per instructions. (Item 2)
- 10. Connect free end of runway whip hose (Item 8b) to open end of air hose bracket (Item 6), on bridge. (Air Hose bracket included in bridge kit)
- 11. Install Bridge Festoon Kit using brackets,cable, whip hose, and coiled hose to bridge using steps 1,2,3,4 & 6 above.

■ Unified Industries, Inc. recommends the use of a Filter Regulator or Filter Regulator Lubricator with any air festooning.

If using FR or FRL:

- a. Attach a whip hose (Item 8c) to Air Hose bracket on bridge and to FR or FRL.
- b. Connect another whip hose (Item 8d) to FR or FRL and top elbow of Bridge festoon bracket.

If NOT using FR or FRL:

- a. Attach a whip hose (Item 8c) to Air Hose bracket to top elbow of bridge festoon bracket.
- b. Install coiled hose to bottom elbow on festoon bracket.
- c. Use coupling and attach whip hose (Item 8e) to other end of coiled hose.

SYSTEM CHECK

- Pressurize system and check for leaks.
- Tighten connections to fix leaks as required.

INSTALLATION OF ETA FLAT WIRE ELECTRIFICATION

■ Note: ETA runways should be installed level and secured, prior to festoon installation.

INSTALLATION PROCEDURE

1. Loosen nuts and bolts on flat wire saddles attached to the trolleys.
2. Roll trolleys with flat wire saddles (Item 7), into the end of the runway closest to the power drop.
3. Install bridge per instructions page (Item 5).
4. Attach ETA Double End Caps per instructions page (Item 2a).
5. Install load trolley or hoist.
6. Roll trolleys with flat wire saddles into the end of bridge rail.
7. Attach ETA Double End Caps per instructions page (Item 2b).
8. Connect junction boxes, (Item 4), to top of runway and on top of bridge in locations where there will be no interference with bridge operation.
9. Connect plant electrification to runway junction box (Item 4). **NOTE: Make sure power to wire is turned off**
10. Attach flat wire (Item 8), to runway junction box and insert through runway flat wire anchor (Item 6).
11. Insert flat wire through saddles on runway trolleys with maximum equal spacing of five feet.
12. Install end of runway flat wire through bridge flat wire anchor (item 6) and into bridge junction box.
13. Attach bridge flat wire from bridge junction box (Item 4) and insert through bridge flat wire anchor (Item 6).
14. Insert flat wire through saddles on bridge trolleys with maximum equal spacing of five feet.
15. Connect bridge flat wire to hoist.
16. Tighten nuts and bolts on flat wire saddles.

INSTALLATION OF AN ETA JIB CRANE

■ All standard ETA jibs are shipped in (2) pieces, Jib Column Assembly (see figure 1) and Jib Crane Assembly (see figure 2).

1. Place Jib Column Assembly in desired location.
2. Shim under base plate to level vertical column in all directions.
3. Use concrete lag bolts or threaded rod and epoxy to secure Jib Column Assembly in place. Always allow the manufacturer recommended dry time for epoxy type anchors before installing the Jib Crane Assembly. The print package shipped with the jib will specify the minimum anchor requirements for your Jib Crane.
(Anchor Bolts not included with Jib, but may be purchased)
4. Attach lower hinge to lower jib hinge mount as shown in figure 2.
5. Hand tighten the nut on the lower hinge assembly.
6. Attach the upper hinge to the upper hinge mount as shown in figure 2.
7. Hand tighten upper and lower slot nuts. Install cotter pin through slot nuts and hinge bolts at upper and lower hinge mount. Secure the cotter pin by spreading the prongs in opposite directions, using pliers if desired. **Do not over tighten.**

Figure 1 --Jib Column Assembly

ETA Jib and Column Maintenance:

- A visual inspection of all components should be done every 6 months to check for loose, damaged or missing parts. This should include hardware, concrete anchors, tie-rod, upper and lower hinge assemblies and safety pins.
- The grease zerks located on the upper and lower hinges should be greased every 6 months with an all purpose lithium-based grease. For high cycle applications the zerks may need to be greased more often.

INSTALLATION OF A FREE STANDING STRUCTURE

This structure is designed to be self-supporting and stable after it is fully completed. It is solely the contractor's responsibility to ensure the stability of the structure and its component parts, and the adequacy of temporary or incomplete connection, during erection. This includes the addition of whatever temporary bracing, guys, or tie-downs that might be necessary. Such material is not shown on drawings. If applied, they shall be removed as conditions permit, and shall remain the contractor's property.

1. Use install prints to layout columns. Take careful note to ensure column top plates are in the orientation showing on the installation prints.
2. Place header beams on top of columns. Attach header to column using provided hardware and pretension per drawing notes.
3. Locate stringers locations from print.
 - Stringer must be level ± 0.188 inches per 20 feet.
 - Stringer must be parallel ± 0.125 inches
4. Use supplied hardware to attach stringers to headers using provided hardware and pretension per drawing notes.
5. Install ETA system per instructions on page 18.
